# 2018.01.19 RELEASE NOTES

## CONTENTS

# Improvements

## Sales Order

### NS-761 Improved Error Messaging for Duplicate Sales Price Details

The following user-friendly error messages were added to Price List record views:

- Items Grid: 'Duplicate items are not allowed.' The message is displayed when a user enters a duplicate item.
- Addresses 'Grid: Duplicate Customer Addresses are not allowed. Please check Address selection and try again.' The message is displayed when a user enters a duplicate customer address.

# Bug Fixes

## Inventory

### NS-2831 Fixed Ship Via Site Owner Change Issue

Previously, changing the 'To Owner' on a Transfer Receipt transaction record, created a new lot to the 'Ship Via' site with different Owner values. The issue is now fixed. Changing the 'To Owner' value on a Transfer Receipt record only impacts the 'To Site' Lot.

## Sales Order

### NS-1230 Fixed Workflow Data Access for Sales Order List Views

Previously, users with no assigned access to a workflow step could view all transactions in the Sales Order Transaction list views (Transactions, Transaction Items and Shipments List Views) despite the workflow step of the transaction record. The issue is now fixed. Only transactions the user has visible and/or editable access are displayed in the list views for the user.

### NS-2826 Fixed Sales Order Deletion

Previously, an error message was displayed when a user deleted a Sales Order transaction record, which had a Brokerage type Sales Program assigned to the transaction. This issue is now fixed.

### NS-2834 Fixed Workflow Data Access for Sales Order Records

Previously, the workflow data access permissions were not enforced on Sales Order transaction records as expected and users with only visible rights were able to edit Sales Order transactions. The issue is now fixed.

### NS-2841 Fixed Address Set Records Attributes Issue

Due to a bug, addresses were not correctly assigned to Address Set records when attribute values were selected on the address set record. The issue is now fixed.
