Improvements

Integration

NS-2902 Added Attribute Class Validation to the Item Import Process

A new Attribute Class validation was added to the item import process. If a user imports item attributes without Attribute Class item property, the import process fails and an error message 'Must supply an Attribute Class if providing Attributes.' is displayed in the Error text field.

Inventory

NS-2900 Improved the Performance of the Update Costs List View

Previously, users were experiencing latency when loading the Update Costs list view. The performance of the list view was improved to decrease the page loading time.

Manufacturing

NS-2911 Updated the BOM List View Quantity Rounding

The Input Quantity, Output Quantity and Rate columns in the Bill of Materials list view was updated to display the quantities with decimal places defined in the Manufacturing Preference 'BOM Rounding Precision'.

Sales Order

NS-1790 Removed Unused Columns from Allocate Item and Find Lots Pages

The following unused columns were removed from the grid section of the Sales Order: Allocate Item and the Inventory: Find Lots pages:

- Require Whole Units
- Manage

Bug Fixes

Inventory

NS-2840 Fixed Excel Export to Display Correct Values

Previously, when the following record view data was exported to Excel, the values were not displayed correctly:

- Company: Preferences
- Financial: Project Record View
- Inventory: Production Batch Record View (Properties and Attributes)
- Inventory: Transaction Class Record View (Properties)
- Inventory: Item (Attributes)
- Purchasing: Credit Memo / Invoice Record View (Items Grid)
- Purchasing: Tender Resales Record View (Items Grid)
- Purchasing: Vendor Record View (Properties and Attributes)
- Purchasing: Tax / Premium Record View (Properties)
- Sales Order: Site Record View (Properties)
- Sales Order: Preferences
- Sales Order: Customer Record View (Properties and Attributes)
- Sales Order: Address Record View (Properties and Attributes)
- Sales Programs: Preferences

This issue is now fixed and the data is exported correctly.

Note: This change may require users to recreate and save any previously created custom views saved to the above record views.

Purchasing

NS-2899 Added Properties Tab to the Purchase Order Record View

The 'Properties' tab was unintentionally removed from the Purchase Order record view. The tab was re-added.

Sales Order

NS-2904 Fixed Price List Record View

Some changes to the Price List record view were unintentionally released to 2018.02.02 build and this was causing issues when Price List records were opened. The issue is now fixed.
