Improvements

INVENTORY

NS-1624 Created Inventory Production Transaction Import Feature

This new Inventory Transaction feature allows users to bulk upload Inventory Transactions using a spreadsheet. Currently the feature is only available for Production type Inventory Transactions. The feature is located on Integration Inbound List, which is located under Company module.

SALES PROGRAMS

NS-1601 Disabled Used Sales Program Deletion

Previously, users could delete Sales Programs which were used in transactions and this was causing issues with existing transactions. With this change users are no longer able to delete Sales Programs which have been used on Transactions and an error is displayed instead.

SALES ORDER

NS-1642 Updated Sites Records

This improvement included the following changes:

- Country, Fax and Email fields have been added to the Site Address section.
- Inactive Sites have been added to the Sites List View.
- Contact Types have been added to the Sites Record.
