Improvements

COMPANY

NS-1802 Disabled Reprocessing for Import-type Inbound Integrations

Previously, if a file import failed, it was reprocessed every 1 minute for 48 hours. With this change the reprocess work has been disabled for Inventory Transaction and Inventory Production Batch transaction types.

INVENTORY

NS-1772 Enhanced the Error Message when Inventory Transactions are Over-allocated

Previously, an error message was displayed on inventory transactions when an inventory lot was over-allocated and the property 'Negative Available Balances' was set to Not Allowed, but the error message didn't indicate which lot was being over-allocated. The error message has now been updated with the lot details.

Bug Fixes

SALES ORDER

NS-1815 Fixed Multiple Order / Multiple Document Email Feature

The Sales Order list view allows users to email multiple documents for one or many orders, but this was not working as expected and only one document could be emailed at a time. This has now been fixed and users can select multiple documents for multiple orders and email them successfully.

SYSTEM

NS-1814 Fixed Data Access Group to Display Checkboxes

NorthScope was upgraded to a new framework version as part of 2017.03.23 release. This new framework introduced a bug on the Data Access Group page. The line item checkboxes were not visible in the UI. This issue has now been fixed.
